<400>   1
For all sequences using "Artificial sequence", for numeric identifier
<213>, a mandatory feature is required to explain the source of the
genetic material. The feature consists of <220>, which remains blank,
and <223>, which states the source of the genetic material. To explain
the source, if the sequence is put together from several organisms,
please list those organisms. If the sequence is made in the laboratory,
please indicate that the sequence is synthesized. These errors appear in
other sequences in the sequence listing. Please chech for similar errors
and make all necessary changes.

****************************************************************
